SUMMARY

Java Developer with **2+ years** of hands-on, full-SDLC experience building and shipping backend applications with Spring Boot, REST APIs, Spring Data JPA, Hibernate, and MySQL. Strong grounding in core Java, OOP, JDBC, MVC architecture, concurrency patterns, and JVM fundamentals, applied across **20+ production Java releases** with a strong quality track record.

Recently built and deployed **Job Engine**, a full-stack job-search and ATS resume-matching platform (Spring Boot, React, MySQL, Docker), including PDF parsing, dynamic query filtering, and a version-controlled resume history system. Full-stack capable with React and JavaScript; available for immediate joining.

TECHNICAL SKILLS

Core Java: OOP, Collections Framework, Exception Handling, Multithreading, Concurrency Patterns, Generics, Class Loading Basics, JVM Fundamentals, SOLID Principles, GoF Design Patterns (Singleton, Observer, Factory, State)

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security, REST APIs, Microservices, MVC Architecture

Database: MySQL, JDBC, JPQL, Stored Procedures, Database Schema Design

Frontend: React, JavaScript (ES6+), HTML5, CSS3, Axios

Testing & Tools: JUnit, Mockito, Postman, Git (version control & CI-friendly workflows), Maven, IntelliJ IDEA, VS Code, Log4j/SLF4J, JWT, Agile/Scrum

Other: Data Structures & Algorithms, Bean Validation, Event-Driven Design, Reusable Library Design, Scalable Application Design Principles

PROFESSIONAL EXPERIENCE

Java Developer (Junior Programmer) — HFG Entertainments Pvt Ltd

Oct 2023 – Nov 2025

Chennai, India · Full SDLC · Core Java · OOP · Multithreading · Design Patterns · Agile/Scrum

- Contributed to the development and deployment of 20+ Java applications across the full SDLC — from requirements and system design through development, QA, and release — maintaining a strong quality record with minimal post-release defects.
- Built real-time, event-driven Java systems handling concurrent user input across 5+ device configurations; improved performance by applying concurrency patterns, multithreading, thread synchronization, and asynchronous callback patterns.
- Designed database schemas and data access logic using JDBC/JPA to support core business workflows, keeping queries efficient and data integrity consistent.
- Applied OOP, MVC architecture, SOLID principles, and GoF design patterns (Singleton, Observer, Factory, State) to build loosely coupled, reusable, and scalable Java codebases.
- Participated in code reviews and Agile/Scrum ceremonies — sprint planning, backlog grooming, and task estimation — helping the team consistently meet sprint delivery goals, using Git for version control throughout.

PROJECTS

Job Engine — Full-Stack Job Search & ATS Resume Matcher

Personal Project

Java 17 · Spring Boot 3 · Spring Security (JWT) · Spring Data JPA · MySQL · React · Apache PDFBox · iText · Docker · Railway/Vercel

- Architected a full-stack career platform with JWT-based stateless authentication, BCrypt password hashing, and role-based access control, exposing secured RESTful APIs built with Spring Boot 3 and Spring Security.
- Implemented dynamic multi-criteria search using Spring Data JPA Specifications and the Criteria API, combining filters (tech stack, location, work mode, experience range) into a single optimized MySQL query.
- Built an ATS resume-matching engine: parsed uploaded PDF resumes with Apache PDFBox, extracted skills via keyword-dictionary matching, and computed weighted match scores with matched/missing skill breakdowns.
- Designed a version-controlled resume history system with iText-based dynamic PDF generation, linking tailored resume variants to job applications via JPA entity relationships; enforced Bean Validation and centralized error handling with `@RestControllerAdvice`.
- Built a drag-and-drop Kanban board (React) with optimistic UI updates backed by a Spring Boot status API; documented endpoints via Swagger/OpenAPI, containerized with Docker, and deployed to production (Railway, Vercel).

Student Management System — Full-Stack Java Application

Personal Project

Spring Boot · React · JavaScript (ES6+) · Spring MVC · Spring Data JPA · Hibernate · Spring Security · JWT · MySQL · REST APIs · Maven

- Architected a full-stack application with 10+ RESTful API endpoints using Spring Boot, Spring MVC, the DTO pattern, and Hibernate ORM on MySQL, paired with a React + JavaScript (ES6+) frontend using Axios for client-server communication.
- Structured the backend with a layered Controller-Service-Repository architecture (MVC) to separate concerns and keep the codebase maintainable and reusable as features were added.
- Secured all endpoints with Spring Security and JWT authentication with role-based access control (RBAC); enforced Bean Validation and global exception handling to standardize error responses.
- Built a React UI with component-based architecture and `useState/useEffect` hooks; designed Hibernate one-to-many/many-to-many database schema relationships with JPQL and custom Spring Data repositories, reducing query code by ~40%.

EDUCATION & CERTIFICATIONS

MCA — Nehru College of Management, Coimbatore

2020 – 2022

B.Sc (Hons.) Physics, First Class — Chikkanna Govt Arts College, Tiruppur

2017 – 2020

Certification: Full Stack Web Development — Eagle Tech IT Solutions, Chennai
